PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years of experience building scalable products end-to-end — from React/Next.js interfaces to server-side APIs, data models, and PostgreSQL schemas. Deep expertise in payment flows, financial systems, and global B2B SaaS platforms. Proven track record of end-to-end ownership: from product discovery and RFC participation through deployment, monitoring, and iteration. Integrates AI tooling as a core part of the development workflow — Claude, Cursor, CodeRabbit, and GitHub Copilot used daily for coding, debugging, architecture review, and code review automation. Thrives in remote-first, cross-functional environments and comfortable communicating complex technical decisions to both engineering and non-technical stakeholders.

EXPERIENCE

Keep Technologies — Senior Software Engineer

May 2026 – Present · Remote

- Architected and led a merchant partnership platform enabling cross-product integrations with external businesses — projected to onboard 300 new merchants and generate ~\$4M ARR in year one
- Led a web performance initiative: reduced homepage first paint by 67% (1.8s → 0.6s), server response time by 85% (~4s → ~580ms), and login LCP by 68% — Lighthouse score rose from 80 to 95 and layout shift eliminated across all unauthenticated pages
- Built server-side data fetching architecture and API route patterns (Next.js) adopted as the team standard; authored a Data Fetching Guide for the engineering team
- Owned and maintained Metabase alerting dashboards: triaged production alerts, investigated root causes through SQL, created new monitors, and fixed data discrepancies in coordination with backend and data teams
- Applied strong SQL and PostgreSQL knowledge to validate financial calculations, debug ledger inconsistencies, and support data reconciliation across capital fundings and installment schedules
- Served as Frontend Guild Lead for nearly a year: set coding, testing, and AI-assisted review standards (CodeRabbit, Copilot); aligned quarterly priorities with engineering leadership; mentored engineers through code reviews and pair programming
- Integrated AI tooling as daily workflow: Claude (architecture review, debugging, custom skill creation), Cursor (AI-native IDE), CodeRabbit (automated PR review), GitHub Copilot (inline completion) — established as team standards
- Authored 33% of the team's all-time end-to-end and integration test coverage within a single semester (Jest, Cypress)

Keep Technologies — Software Engineer

April 2024 – May 2026 · Remote

- Participated in the full product lifecycle — RFC authoring, discovery, implementation, QA/bug bash, analytics instrumentation (Amplitude/Segment), and post-launch monitoring (Datadog, LogRocket)

- Worked hand-in-hand with product and operations teams throughout delivery — requirements gathering, stakeholder meetings, solution design, and post-launch results reporting
- Maintained and scaled the internal design system and shared component library, standardizing UI patterns across multi-repo applications
- Built installment self-payment end-to-end: **\$314K+** collected from upcoming and delinquent installments
- Capital Origination Fee UI: monthly origination **doubled from ~\$1.6M to ~\$3.3M** in months following launch
- Application process V2: conversion (initiated → approved) increased **~8%** post-launch
- Multi-funding payment flows: **1,000+ users** since launch with no major incidents
- Optimized internal admin tool (TypeScript + tRPC + Next.js) from ~20s → under 1s load time; reduced filter interactions from 5 steps to 1
- Led Next.js 15 / React 19 upgrade across all monorepo applications; executed same-day rollback of a production authentication regression and established end-to-end auth test coverage as the systemic fix
- Eliminated a major source of CI flakiness for the entire engineering team by replacing an unstable external service dependency in test environments

Sophilabs / Crowley — Semi Senior Software Engineer

May 2022 – April 2024 · Remote, United States

- Built a maritime logistics platform consolidating multiple distributed data endpoints into a unified interface with user-configurable preferences, using Node.js, Express, React, TypeScript, and DynamoDB
- Designed and implemented REST APIs consumed by the React frontend
- Increased unit test coverage from 50% to 95%; improved application load time on a data-heavy dashboard

Sophilabs / Gemini (Crypto Exchange) — Software Engineer, Marketing & Technology

April 2021 – May 2022 · Remote, United States

- Built and optimized user-facing web experiences at Gemini, a leading regulated cryptocurrency exchange
- Achieved a 30% performance improvement on a Next.js/React application through profiling and engineering best practices
- Built responsive, accessible user interfaces using Next.js, React, TypeScript, and Styled Components
- Restructured legacy codebase to follow atomic design patterns and maintainability standards

Sophilabs / Actual.io — Software Engineer

Nov 2020 – April 2021 · Remote, United States

- Developed user management and payment features for a fintech application using Django, Stripe, and PostgreSQL
- Built full-stack features across frontend (React, TypeScript) and backend (Django REST Framework, PostgreSQL) using scrum methodology
- Designed and optimized database schemas and REST API endpoints for payment flows

Agrosmart — Web Developer Intern

Nov 2019 – Sept 2020 · Sao Paulo, Brazil

- Built a sensor data validation system for farm telemetry across Brazil using PHP, JavaScript, and PostgreSQL

- Achieved a 30% improvement in measurement accuracy; collaborated closely with engineering and client teams

EDUCATION

Universidad del Norte — Bachelor's degree in Systems Engineering and Computer Science · Barranquilla, Colombia · December 2021

AIESEC — Leadership Development Program · Sao Paulo, Brazil · February 2020

SKILLS

Languages & Frameworks: TypeScript, JavaScript, React, Next.js, Node.js, Express, NestJS (exposure), React Native (Expo), Django

Frontend: Apollo Client, GraphQL, tRPC, TanStack Query, Redux Toolkit, React Hook Form, Zod, Tailwind CSS, Chakra UI, Storybook

Backend & Databases: PostgreSQL, SQL, Prisma ORM, REST APIs, Supabase, DynamoDB, Redis, RabbitMQ, MongoDB

Data & Observability: Metabase (dashboard creation, alerting, data investigation), Datadog, Sentry, LogRocket, Amplitude, Segment, Statsig

Testing: Jest, Cypress, React Testing Library — end-to-end, integration, and unit testing

Infrastructure & Tooling: AWS (Lambda, S3, ECS), Docker, Turborepo, Temporal, GitHub Actions, Statsig (feature flags)

AI-Assisted Development: Claude (architecture review, debugging, custom skill creation), Cursor (AI-native IDE), GitHub Copilot (inline completion), CodeRabbit (automated PR review) — integrated into daily development workflows and established as team standards

Languages: English · Spanish · French
